GOSTUJIČE PREDAVANJE 007

PLEČNIKOVA PREDAVALNICA

19:00

08.04.

Between super-scale speculative urban investigations and small-scale examinations of individual buildings, the teaching methods and interests of Neil Denari focus on organizational systems of repetition in both 2 and 3 dimensions. Using a graphic approach to these systems, urban plans emerge from bespoke grids and patterns that generate modular and scalable building forms and experiences. Working within what Denari calls “Diagrammatic Realism”, the students’ work falls between the plausible and the fictional. The lecture will be held in English.

“Neil M. Denari, FAIA, is the founder and principal of NMDA and a Professor of Architecture at UCLA.”
